Description

The TRC-NW400 Non Mydriatic Retinal Camera introduces a new generation of retinal cameras where ease of use and high quality retinal imaging are combined in a single and compact instrument.

The camera operates in a full automatic mode where the alignment, focusing, acquisition and traveling from one eye to the other are performed without operator's intervention.? In full auto mode, alignment, focusing, acquisition and movement between right eye and left eye are operated automatically.? Virtually anyone can use the instrument without practice.? A simple touch on the screen to select a mode and the center of the pupil is all it takes.
